Introduction

What is HisabKitab?

A web app that replaces the paper khata used by small shops and individuals across India with a clean, secure, browser-based digital ledger.

Problem

Small business owners have no simple way to track who owes them and who they owe. Paper records get lost, have no running balance, and cannot be accessed remotely.

Solution

HisabKitab provides a digital ledger accessible from any device, with real-time balance, secure login, and a full reports view.

Live: hisabkitab.adursh.me

Objectives

- Build a web-based digital ledger accessible from any browser
- Track money received (credit) and money given (debit) per contact
- Show real-time running balance for each party automatically
- Secure each user's data using JWT authentication
- Support two account types: Shop Owner and Individual
- Show a Reports page with total receivable, payable, and net balance
- Deploy the app live on a public domain

Methodology

CHITKARA UNIVERSITY

Agile development - built in phases:

Phase 1: Requirement Analysis - studied OkCredit UX, defined user stories

Phase 2: System Design - designed MongoDB schema, REST API, UI wireframes

Phase 3: Backend - built Express server, Mongoose models for User, Party, Transaction

Phase 4: Frontend - built React pages using Vite, added routing and auth context

Phase 5: Testing - tested all API endpoints, fixed edge cases

Phase 6: Deployment - deployed at hisabkitab.adursh.me with custom domain

Tools and Technologies

Frontend: React.js with Vite

Backend: Node.js with Express.js

Database: MongoDB Atlas

ODM: Mongoose

Authentication: JWT

Styling: CSS3

HTTP Client: Axios

Version Control: Git and GitHub

Deployment: hisabkitab.adursh.me

Implementation

Key features built:

- 3-Step Registration: Account Type, Personal Details, Set Password with review
- JWT Auth: every route protected, data fully isolated per user
- Dashboard: You'll Receive / You Owe / Net Balance summary cards
- Transaction View: green bubbles for credit, red bubbles for debit
- Running Balance: auto-calculated on every transaction entry
- Reports Page: top-5 receivables and payables summary
- Settings Page: edit profile and view account details

Results and Outcomes

All features built and live:

User Registration and Login (JWT with bcrypt)

Party Management: Customers and Suppliers

Transaction Recording: Credit and Debit with notes

Running Balance per Contact

Dashboard with Summary Cards

Reports and Summary Page

Settings and Profile Management

Conclusion and Future Scope

Conclusion:

HisabKitab was successfully built and deployed. It solves a real problem for small business owners in India by replacing their paper khata with a fast, secure web app.

Future Scope:

Mobile App: React Native for Android and iOS

WhatsApp Reminders: auto payment alerts via WhatsApp API

PDF Export: download transaction history as PDF

Analytics: monthly charts for receivables and payables

SMS Notifications: alert both parties on each transaction

Thank You
